I försöken var Kaarles avkastning i hela landet 100 = 5 584 kg/ha, på odlingszon I 100 = 3 823 kg/ha och odlingszon III 100 = 6 780 kg/ha

*) I försöken förekom ingen liggsäd eller man fick resultat från endast ett försök. Stråstyvheten kunde inte fastställas pålitligt.
